WPI; 1998-362411/31. P-PSDB; ADH11354. Vertebrate homologues of C. elegans UNC-53 protein - useful for, e.g. promoting neuronal regeneration, treating chronic neuro-degenerative diseases or acute traumatic injuries.

Disclosure; Page 414-417; 479pp; English.

```
derivative or bioprecursor of UNC-53. Also described: (1) a cDNA sequence encoding a vertebrate homologue of the C. elegans UNC-53 protein; (2) a nucleic acid which hybridises to the cDNA of (1), (3) vector comprising the cDNA as in (1); (4) a host cell containing the vector as in (3); (5) a transgenic cell, tissue or animal comprising the vector as in (3); (6) a compound identified as an enhancer or inhibitor of the regulation of the repulation of cell shape, motility or the direction of cell migration for use as a compound identified as an enhancer of regulation of whether a protein is an inhibitor or enhancer of regulation of cell behaviour, growth, shape or motility or the direction of migration by contacting a host cell containing a change of phenotype; (8) a method for identification of vertebrate homologues of (0) and containing a change of c. elegans unc-53 gene by hybridising a probe of 15-50 bp of the unc-53 sequence to a DNA library; and (9) a method for identification of a protein which is active in the signal transduction pathway of a cell of which a vertebrate homologue of UNC-53 is a component comprising; (i) identifying an inthal challed that a component comprising of (i) identifying an early that has a component comprising (ii) identifying an early and the signal contacting and cell with an antibody to the UNC-53 homologue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antibody/homologue complex; and (iii) analysing such a complex to identify any non-antibody protein bound to the complex. UNC-53 is a signal transducing or signal integrator protein involved in controlling directionality of cell migration and cell shape in C. elegans. Vertebrate homologues of UNC-53 can be used to promote neuronal regeneration, revascularisation or wound healing, to treat chronic neurodegenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
present invention describes a vertebrate protein homologue of an UNC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    diseases or acute traumatic injuries or fibrotic diseases. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 ACAGCAAGGGGAAGATTGGGAAGACAATAGCAGGCATGCTGGGGGATGCGGTGGGCTCTA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0; Gaps

The specification describes a microsphere comprising dihydrazide derivatised hyaluronic acid crosslinked to a nucleic acid (NA). The microspheres cause reduced inflammatory responses, and have increased safety and biodegradability. The microspheres are useful for transfecting a cell of a subject and for treating a subject having myocardial ischemia, by increasing cardiac angiogenesis. They are also useful for treating haemophilia. The present sequence represents the plasmid pcDNNA:1/GS, into which is inserted a polymucleotide sequence which is crosslinked to hyaluronic acid. The polymucleotide sequence encodes a

Also described: (1) an expression vector containing (I); (2) a eukaryotic cell containing (I); and (3) methods for identifying a compound (A) that inhibits processing of APP, using the cells of (2). (I) has nootropic and neuroprotective activities. (I) can be used to produce eukaryotic cells
operably linked to an untranslated region (UTR) of the VEGF gene, and detecting expression of the reporter gene. A compound is identified as modulator if the level of expression of the reporter gene in the presence of the compound is altered as compared to that in the absence of the compound or in the presence of a control. Compounds identified by MI are useful for treating, preventing or ameliorating cancer or its symptoms, and/or for inhibiting angiogenesis. This sequence corresponds to the vector pMCPL, a mammalian expression vector designed to integrate into the genome at sites containing the FRT recombination site using the flp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          fusion protein; amyloid precursor protein; APP; transcription factor; nootropic; neuroprotective; APP inhibitor; amyloid precursor protein inhibitor; Alzheimer's disease; beta-secretase;

that express FP and are useful in screening for agents that inhibit processing of APP. The agents are potentially useful for the treatment or prevention of Alzelmer's disease. Cells that express FP can screen for inhibitors of: (a) beta- and gamma-secretases; and (b) cytoplasmic/extracellular APP signaling in a single assay. Cell-based assays may be free of interference from alpha-secretase activity and are homogeneous (no chromatography, immunoperecipitation or washing required) so well suited to high-throughput screening. The present sequence represents a plasmid nucleotide sequence from the present invention.
                                                                                                                                                                                                                                                                               1 ACAGCAAGGGGGAGGATTGGGAAGACAATAGCAGGCATGCTGGGGATGCGGTGGGCTCTA

The present invention describes a vertebrate protein homologue of an UNC-
53 protein of Caenorhabditis elegans or a functional equivalent,
64 derivative or bioprecursor of UNC-53. Also described; (1) a cDNA sequence
65 encoding a vertebrate homologue of the C. elegans UNC-53 protein; (2) a
66 cnucleic acid which hybridises to the CDNA of (1); (3) vector comprising
67 cnucleic acid which hybridises to the cDNA of (1); (3) vector comprising
68 compound identified as an enhancer or inhibitor of the regulation of
69 cell shape, motility, or the direction of cell migration for use as a
60 cell shape, motility, or the direction of cell behaviour, growth, shape or
60 inhibitor or enhancer of regulation of cell behaviour, growth, shape or
61 charapeutic; (7) a method for determining a change of phenotype;
62 cell shape, motility or the direction of ell behaviour, growth, shape or
63 cell shape or of migration of cell behaviour, growth, shape or
64 cell shape of UNC-53 and determining a change of phenotype;
65 cell shape of UNC-53 and probe of 15-50 bp of the unc-53 sequence to
66 cell with an antibody protein pathway of a cell of which a vertebrate
67 conclusion of the UNC-53 is a component comprising: (i) identifying an extract of a cell with an antibody protein bound to the complex. UNC-53 is a
68 signal transducing or signal integrator protein involved in controlling contractionality of cell migration and cell shape in C. elegans. Vertebrate complexes a complexes and (ii) analysing such a complex to the complexe of promote neuronal regeneration elemental controlling contraction and cell shape in C. elegans. Vertebrate complexes and controlled controled controlled controlled controlled controlled controlled control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequence is used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 diseases or acute traumatic injuries or fibrotic diseases.                                                                                                                                The present invention relates to a method of developing a sensor cell, for determining the activity of a target gene in the cell, which comprises providing a homogeneous population of cells, where each of the cells comprises a signal transduction detection system and introducing into the population of cells an isolated DNA construct comprising a promoter operatively linked to a targeting sequence. The method is useful in developing a sensor cell for determining the activity of a target gene in the cell. The sensor cell and the methods are useful in developing new and therapeutic drugs directed to the targets. The present sequence is a vector used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid molecules having one or more recombination sites and encoding an amino acid sequence tag, useful for recombinational and/or topoisomerase-mediated cloning methods for producing fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid molecule (I) comprising one or more recombination sites, and one or more nucleic acid sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
Developing a sensor cell, useful in determining the activity of a target gene and in developing therapeutic drugs, comprises providing cells comprising a signal transduction detection system and introducing DNA construct into cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 ACAGCAAGGGGGAGGATTGGGAAGACAATAGCAGGCATGCTGGGGATGCGGTGGGCTCTA

which encode an amino acid sequence tag. (I) can also comprise one or more topolsomerases. The amino acid sequence tag is an amino acid sequence that is capable of being post-translationally modified, and is an amino acid sequence that is capable of being post-translationally modified by biotinylation, at a capable of being post-translationally modified by biotinylation, attachment of 4-phosphopanthethelme, attachment of lipoic acid or attachment of flavins, and is an amino acid sequence that is capable of being biotinylated, wherein the amino acid sequence that is capable of being biotinylated is all or a portion of the Klebsiella pneumoniae or being biotinylated is all or a portion of the Rebsiella pneumoniae or can accepted ecarboxylase a subunit, all or a portion of the Escherichia coli biotin carboxyl carrier protein component of acetyl-CoA carboxylase. The methods and compositions of the present invention are useful for identifying, concentrating, purifying and/or producing fusion proteins that comprise an amino acid sequence tag. The nucleic acid molecules can also be used in recombinational cloning and/or topolsomerase. mediated cloning methods to produce polynucleoride constructs which encode the fusion proteins. The present sequence

The present invention describes a vertebrate protein homologue of an UNC-derivative or bioprecursor of UNC-53. Also described: (1) a cDNA sequence derivative or bioprecursor of UNC-53. Also described: (2) a concoling a vertebrate homologue of the C. elegans UNC-53 protein; (2) a mucleic acid which hybridises to the CDNA of (1); (3) vector comprising the vector as in (3); (5) a transgenic cell, tissue or animal comprising the vector as in (3); (6) a compound identified as an enhancer or inhibitor of the regulation of cell shape, motility, or the direction of cell migration for use as a cherapentic; (7) a method for determination of whether a protein is an inhibitor or enhancer of regulation of cell migration for use as a compound identification of welther a protein is an inhibitor or enhancer of regulation of cell migration for use as a complicy or the direction of migration by contacting a host cell inhibitor or enhancer of regulation of vertebrate homologues of C. elegans unc.53 gene by hybridising a probe of 15-50 bp of the unc-53 sequence to complex in the signal transduction pathway of a cell of which a vertebrate complex in the signal transduction pathway of a cell of which a vertebrate complex in the signal transduction pathway of a cell of which a vertebrate complex in antibody/homologue complex; and (11) analysing such a complex to antibody/homologue complex; and (11) analysing such a complex to antibody/homologue complex; and (11) analysing such a complex to directionality of cell migration and cell shape in C. elegans. Vertebrate complex of accidentify any non-antibody protein bound to the complex. UNC-53 is a component protein involved in controlling charaction and cell signal integrator protein involved in controlling charaction or wound healing, to treat charaction are recovered in controlling controlling or signal integrator protein involved in controlling charaction or wound healing, to treat charaction are recovered in controlling or signal involves of promote neuronal regeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3217 ACAGCAAGGGGGAGGATTGGGAAGACAATAGCAGGCATGCTGGGGATGCGGGGGCTCTA 3276

                                                                                                                                               The invention relates to a new nucleic acid molecule (I) encoding a fusion polypeptide useful as a vaccine composition. (I) comprises a first nucleic acid sequence encoding a first polypeptide or peptide that promotes processing via the Major Histocompatibility Complex (MHC) class I pathway (MHC-I-PP) and/or promotes development or activity of an inferenting call (APC). The second nucleic acid sequence is linked in frame to the first nucleic acid sequence or to a linker nucleic acid sequence and encodes an antigenic polypeptide or peptide. The methods and compositions of the present invention are useful as therapeutic vaccine for cancer and for major viral infections, such as hepatoma and cervical cancer, that cause morbidity and mortality. They can also be used in treating animal diseases, such as equine herpesvirus, bovine viruses, Marek's disease, retroviral and lentiviral diseases and rabies, in the veterinary medicine context. The present sequence represents the curle and present sequence represents the

The present invention describes a nucleic acid (I) encoding a chimeric fusion or fusion polypeptide comprising a first domain with a cranslocation polypeptide, and a second domain comprising an antigen having at least one antigenic peptide. Also described: (I) an expression vector comprising (I) operatively linked to a promoter and optionally, to one or more regulatory elements that enhance expression of the nucleic acid in a cell; (2) a particle comprising (I) or the expression vector; (3) a cell that has been modified to comprise (I) or the expression vector; (3) a cell that has been modified to comprising a first domain with a translocation polypeptide, and a second domain comprising an antigen having at least one antigenic peptide; (5) a pharmaceutical composition capable of inducing or enhancing an antigen specific immune response.

Comprising (I) expression vector, particle, cell, cell of the particle, cor the chimeric polypeptide; (7) increasing the number of CDB + CTLs specific for a selected desired antigen in a subject by administering the composition described above; (7) increasing the number of CDB + CTLs specific thy administering the composition described above; (8) inhibiting the growth of a tumour in a subject by administering the composition described above; and (8) inhibiting the growth of a tumour in the composition described above; and (8) inhibiting the growth of a tumour in the composition described above; and (8) inhibiting the growth of a tumour in the composition described above; and (8) inhibiting the growth of a tumour in the composition described above; and (8) inhibiting the growth of a tumour in the composition described above; and (8) inhibiting the growth of a tumour in the composition described above; and (8) inhibiting the growth of a tumour in the composition described above; and (8) inhibiting the growth of a tumour in the composition described above; and (8) inhibiting the database of the composition described above; and (8) inhibiting the composition described above; and (8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Translocation domain; bacterial toxin; exotoxin A domain II; ETA; major histocompatibility complex; MHC class I; vaccine; immune response; CD8+ cytotoxic T lymphocyte; CTL; tumour; E7 antigen; pcDNA3 plasmid; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cytostatic activity, and can be used in immunotherapy, and gene therapy. The nucleic acids (1), compositions and methods are useful for treating cancer. The present sequence represents a plasmid vector nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
comprising a first domain with a translocation polypeptide, and a second
domain with an antigen having at least one antigenic peptide, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequence which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 ACAGCAAGGGGAGGATTGGGAAGACAATAGCAGGCATGCTGGGGATGCGGTGGGCTCTA

                                                                                                                                                                                                                                                           Novel chimeric polypeptide e.g., Pseudomonas aeruginosa exotoxin A domain II/human papilloma virus-16 E7 peptide useful for inducing or enhancing antigen specific immune response, or for inhibiting growth of tumor in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to nucleic acid encoding a chimeric polypeptide comprising a translocation domain of a bacterial toxin and at least one antigenic peptide. The preferred translocation domain is domain II of Pseudomonas aeruginosa exoctoria A (ETR(dII)) and the preferred antigen is human papilloma virus type 16 (HPV-16) E7 which is a model tumour nearingenic peptide comprises an epitope that binds to and is presented on the cell surface by major histocompatibility complex (MHC) class I proteins. The nucleic acid of the invention is useful as vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  composition for enhancing antigen specific immune response, increasing the number of CD8+ cytotoxic T lymphocytes (CTLs) and for inhibiting the growth of a tumour. The present sequence is pcDNA3 plasmid vector used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Detection of gamma-secretase by detection of A-beta peptide useful for determining gamma-secretase activity and for identifying inhibitors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 ACAGCAAGGGGAGGATTGGGAAGACAATAGCAGGCATGCTGGGGGATGCGGTGGGCTCTA

This invention describes a novel method for the detection of human gammaserctase by detection of a partial protein formed by cleavage of a fusion protein encoded by a transgene containing a first nucleotide sequence which encodes a protein comprising the amino acid sequence (A) and a second nucleotide sequence which encodes a signal peptide. The products of the invention have neuroprotective and nootropic activity. The method is used to detect activity of gamma-secretase. The transgene and/or vectors are useful for the production of a transgenic call or C. elegans. Transgenic C. elegans is useful in a method for the calcivity. The methods and transgenes activity. The methods and transgenes are useful in research of also useful in a method to identify inhibitors of the gamma-secretase activity. The methods and transgenes are useful in research of Alzheimer's disease. Inhibitors of gamma-secretase are useful in sequence encodes a transgenic anyloid precursor protein (APP) which is sequence encodes a transgenic anyloid precursor protein (APP) which is

```

```
give (Now) to the course to test the multiple cloning site of pcDNA3 and course for multiple cloning site of pcDNA3 into knullifed, digested with kpnl and ligated into kpnl-digested pcDNA3 upstream of the multiple cloning site of pcDNA3 and downstream of the human cytomegalovirus immediate early (HCWV-IE) promoter to create pGT41. A full-length coding sequence of Streptococcus promoter to create a fusion between rsv6 and bppA. Intramuscular into pGT41 to create a fusion between rsv6 and bppA. Intramuscular captured into pGT41 to create a fusion between rsv6 and bppA. Intramuscular captured protection against an otherwise lethal challenge with a pKSD2601, induced protection against an otherwise lethal challenge with a capsulope DNA in eukaryotic cells is claimed. The plasmid includes promoter for driving expression in a eukaryotic cell (e.g. HCMV-IE), DNA promoter for driving expression in a eukaryotic cell (e.g. HCMV-IE), DNA crooding a leader sequence (e.g. of RSVG) which facilitates expression, translation through or transport of the expression product in a cukaryotic cell membrane, and DNA encoding a pneumonoccal epitope such as suitable carrier or diluent, and optionally one or more cytokines or DNA encoding them, or a bacterial delivery system. The vaccine is used to elicit an immunological response in a host, including humans, susceptible to preumococcal infection or sepsis. The plasmid can also be used to express a pneumococcal epitope of interest in vitro. (Updated on 17-OCT-
(see AAV38298) that codes for respiratory syncytial virus

The invention describes a novel method for measuring proliferation of a cell or population of cells. The method comprises obtaining light cell or population deta from a cell containing a Renillal luciferase over a period of time, cell proliferation of a cell or a appulation of cells can be containing the Renilla luciferase enzyme is useful for diagnosing a cell proliferative disorder including: neoplasm or cancer, viral clisorder or disease e.g. Human immunodeficiency virus (HIV), immune disorders e.g. Human immunodeficiency virus (HIV), immune clisorders e.g. hypogammaglobulinaemia and haematologic conditions e.g. manemias, tissue white cell infiltrative disorders, organ failure, conditions of bone and muscle c.g. osteoporosis, endocrine conditions and vascular disorders e.g. orsteoporosis, endocrine conditions and vascular disorders e.g. certoporosis, endocrine conditions and vascular disorders e.g. certoporosis, endocrine conditions and vascular disorders e.g. certoporosis, endocrine conditions and vascular disorders e.g. cell which does not have a cell proliferative disorder. The vector is also useful for determining the effect of an agent on cell to that of a cell publicative disorder. A difference is also useful for determining a cell potained from a sample with the cordition, by transfecting a cell potained from a sample with the cordition, by transfecting a cell obtained from a sample with the cordition cell to interact, and comparing the light emission data from the agent of the cell to interact, and comparing the light emission data from the cell of modulating cell proliferation under conditions that allow the agent of the cell to interact, and comparing the light emission data from the cell of modulating cell proliferation under cell in the absence of the agent of the the light emission data from the light emission data from the light emission data from the light emission data from the light emission data from the light emission data from the light emission data from the light emission data from the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

Determining cell proliferation for monitoring treatment of a subject, comprises obtaining light emission data from cell containing Renilla luciferase for specific time, and detecting a change in the data.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Treating or preventing an ongoing autoimmune disease e.g. diabetes, comprises vaccination with a DNA sequence comprising a CpG motif.

Example 1; Page 48-52; 53pp; English.

The present sequence is that of vector pcDNA3, a multipurpose cloning and expression vector containing the cytomegalovirus (CMV) immediate-early promoter, a polylinker and the bovine growth hormone polyadanylation site. The vector also expresses neomycin resistance in eukaryotic cells. Human heat shock protein 60 (hap60) full-length cDNA was cloned into pcDNA3 under the control of the CMV promoter, creating plasmid pHsp60. In order to explore the potential of a DNA-based therapy of insulin dependent diabetes mellitus (IDDM), the effect of immunisation of NOD mice, which spontaneously develop IDDM, with pHsp60 was examined. Surprisingly, pcDNA3 plasmid was as effective at inhibiting the development of diabetes as was the pHsp60 plasmid. Despite the absence of Hsp60, pcDNA3 induced specific effects on the autoimmunity to Hsp60 intrinsic to the NOD diabetoganic process; down-regulation of T-cell proliferation and the induction of IgG2D antibodies to Hsp60 autoimmunity and on the NOD diabetes. The invention therefore peptide analogue p2777. A CpG oligonucleotide (see ABL53541), present in the pcDNA3 amplicillin resistance gene, reproduced the effects of pcDNA3 con Hsp60 autoimmunity and on the NOD diabetes. The invention therefore provides a method for the treatment or prevention of autoimmune diseases by administering a DNA vaccine which includes a CpG motif and which and a population and page of the pcDNA3 motified antigen associated with autoimmune diseases, especially

Single pass sequencing. Bases called with phred v0.020425.c and trimmed with the aid of the trim_alt option. Vector identified with cross match v0.990329.

Plate: TWM8036 row: C column: 13
Seq prime: GTAATACGACTCACTATAGGG.

Polynucleotide(s) and proteins derived from Staphylococcus aureus -stored on computer readable medium and used in the production of anti-S.aureus vaccines.

Claim 1; Page 2287; 3271pp; English.

This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (RAM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or

                                                                                                                                                                                                                                     8
                                                                                                                                                                                     à
industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S. sureus infection. The polypeptides can also be used in a kit for the immunodetection of S. aureus in a sample. S. aureus is implicated in numerous human diseases, including cellulitis, eylld infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the S. aureus DNA sequences contained on the computer
                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                  9

The closest identifiable promoter for the penicilinase gene in pKT241 (AAN10031) is located in the region 14 to 20 nucleotides before its

```
ö
translational start signal. In the examples, the 3' end of pKT241 was attached to the signal DNA sequence of the DNA fragment (19) for rat preproinsulin (see AAN10033). The closest identifiable promoter for the penicillinase gene in pKT218 (AAN10032) is located in the region 14 to 20 mucleotides before its translational start signal. In the examples, the 3' end of pKT218 was attached to the signal DNA sequence of the DNA fragment (CB6) for rat preproinsulin (see AAN10034)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The closest identifiable promoter for the penicilinase gene in pKT241 (AAM10031) is located in the region 14 to 20 nucleotides before its translational start signal. In the examples, the 3' end of pKT241 was attached to the signal DNA sequence of the DNA fragment (19) for rat perproinantin (see AAN10033). The closest identifiable promoter for the penicillinase gene in pKT218 (AAN10032) is located in the region 14 to 20 nucleotides before its translational start signal. In the examples, the

The plasmid produces secreted beta-urogastrone in a transformed expression system. Similar plasmids may be constructed where the seceretion signal may be coupled with eg. somatostatin, insulin, growth hormone, interferon, IL-2, gastric inhibitory peptide, influenza B SA, epidermal growth factor and thymosine-beta4. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombinant vector for polypeptide secretion - contains signal peptide sequence directly bonded to peptide-coding sequence.

PAIs are large fragments of DNA which comprise pathogenicity determinants. The sequences of the invention are taken from PAI IV and PAI V. PAI IV is located at approximately 64 min (near phev) on the E. coli chromosome and is greater than 170 kb. PAI V is located at approximately 94 min (at phex) on the E. coli chromosome and is approximately 94 min (at phex) on the E. coli chromosome and is approximately 160 kb in size. Antibodies specific to the proteins encoded by the PAI open reading frames of the invention can be used in kits to detect uropathogenic E. coli. The proteins are used in vaccines to elicit

         Sequence encodes beta-urogastrone under the control of a tac promoter. The peptide may be expressed from plasmid pUGT 150s in a transformed E.coli host. The plasmid may carry several separately expressing sequences comprising a tac promoter, SD site, signal peptide, and coding sequence, to produce beta-UG in high yield. (Updated on 10-MAR-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PA field.)

An example of a sequence detected by a probe consisting of polyinosine, polydeoxyinosine, oligoinosine and/or oligodeoxyinosine is labeled. The seDNa and probe are hybridized and the existence of DNA in the product is detected. It can be used to detect the presence of malignant tumour. (Updated on 10-MAR-2003 to add missing OS field.) The present invention relates to Drosophila cell cycle progression proteins (AAM41972-AAM47608) and their coding sequences (ABA90566-ABA90520). The coding sequences and proteins are useful for identifying a substance capable of affecting the function of the corresponding gene, a substance capable of inhibiting the cell division cycle, or capable of inhibiting the cell division cycle, or capable of inhibiting the cell division cycle, or capable of treating a tumour or proliferative disorder, cardiovascular disorders (such as restenosis and cardiomyopathy), autoimmune disorders such as (such as psoriasis), antiinflammatory, antifungal and antiparasitic disorders disorders (such as malaria)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 AGGCTTATTGTCTCATGAGCGGATACATATTTGAATGTATTTAGAAAAATAAACAAATAG

             Sequence of HB101 (pGH201) encoding new beta-urogastrone deriv. Met(21),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                secretion inhibiting action, or cell proliferation promoting action. The deriv. has the same biological or pharmacological activities as beta-urogastrone. It is not susceptible to denaturation by oxidn. and is chemically stable. Deriv. has resistance to proteclytic enzymes such as protease. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New beta-urogastrone deriv. - has gastric acid secretion inhibition and proliferation promotion activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 AGGGTTATTGTCTCATGAGCGGATACATATTTGAATGTATTTAGAAAATAAACAAATAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to Drosophila cell cycle progression proteins (AAM47572-AAM47608) and their coding sequences (ABA90366-ABA90520). The coding sequences and proteins are useful for identifying a substance capable of affecting the function of the corresponding gene, a substance capable of inhibiting the cell division cycle, or capable of inhibiting the cell division cycle, or capable of inhibiting a tumour or proliferative disorder, cardiovascular disorders (such as restenosis and cardiomyopathy), autoimmune disorders such as (glomerulonephritis and rheumatorid arthritis), dermatological disorders (such as psoriasis), antiinflammatory, antifungal and antiparasitic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel method for the optimisation of primer libraries. Specifically, it refers to increasing the affinity of short conjognucleocide primers also known as extendable oligos (EOs), for their template sequences. The present invention describes improved methods for sequencing and the linear and exponential amplification of DNA that can amplification, strand displacement amplification and isothermal DNA amplification. Accordingly, these extendable oligos with improved specificity and affinity are particularly important in fields ranging from biotechnology and agriculture to medical research. This polynucleotide sequence is the electropherogram of a DNA sequencing reaction that used the pUCI9 plasmid and EIS4/T422 oligos, used in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Increasing the affinity of an extendable oligonucleotide (EO) for a target nucleic acid, for providing primers having improved specificity, comprises hybridization of the EO to a template oligonucleotide (TO) and

```
The invention relates to novel isolated prostate gland related nucleic acids (I) and polypeptides (II). (I) and (II) are useful for diagnosis, prognosis, prognosis, prognosis, prognosis, prognosis, prognosis, prostatitis, acute bacterial prostatitis, chronic non-bacterial prostatitis, chronic non-bacterial prostatitis, benign prostatic chronic non-bacterial prostatitis, benign prostatic chronic non-bacterial prostatitis, benign prostatic chromatosis, granulomatous prostatic is malacophakia, benign prostatic chromas, compared to the prostation of the prostation of transitional cell carcinomas, ductal carcinomas, in, (II) and antibody to (II) are useful for diagnosing and treating reproductive system disorders (Paget's disease), autoimmune disorders (systemic lupus erythematosus, rheumatoid cuthitis), bhod-related disorders (sighte cell anaemia), hyperproliferative disorders, urinary system disorders (arrhythmias), respiratory compared disorders, urinary system disorders (arrhythmias), respiratory confisorders (laferances), liver disorders (alsorders (laferances), liver disorders  disorders (laferances), liver disorders, disorders (laferances), liver disorders (laferances), liver disorders, disorders, disorders (laferances), liver disorders, liver disorders (laferances), liver disorders, disorders, disorders, disorders (laferances), liver disorders, liver disorders, liver disorders, liver,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated prostate gland related polypeptide useful for diagnosis and treatment of disorders of prostate such as prostatodystonia, prostatosis, prostatitis, benign prostatic hypertrophy and malacoplakia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              useful to prevent skin aging, for preventing hair loss, to maintain organs before transplantation, and as food additive or preservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      100.0%; Score 101; DB 4; Length 776; 100.0%; Pred. The invention relates to novel isolated polypeptides (I), and

The invention relates to novel isolated polypeptides (I) are useful for

Glagnosing, preventing and treating diseases including immune system

disorders (e.g. congenital and acquired immunodeficiencies, autoimmune

disorders (e.g. rheumatoid arthritis), inflammatory conditions, organ

transplant rejections and graft versus host disease, infectious diseases

(e.g. hepatitis (2), bleeding disorders, haemoglobin abnormalities and

other blood-related disorders (sickle cell anaemia), myeloproliferative

(e.g. daucher's disease and caneer), neurodegenerative disorders

(c.g. qaucher's disease and caneer), neurodegenerative disorders (e.g.

Alzheimer's disease, Parkinson's disease), chromosomal abnormalities

(Down syndrome), ischaemic injury (e.g. stroke), renal disorders (e.g.

Alzheimer's disease, Parkinson's disease), chromosomal abnormalities

(Down syndrome), ischaemic injury (e.g. stroke), renal disorders (e.g.

Glomerulonephritis), cardiovascular disorders (e.g. Addison's

crespiratory disorders, dermatological disorders (e.g. Addison's

crespiratory disorders), liver disorders, gastrointestinal disorders

(inflammatory disorders), liver disorders (cirrhosis), as stimulators of

B-cell responsiveness to pathogens, activators of T-cells, to induce

Cinflammatory disorders), liver disorders (cirrhosis), as stimulators of

Higher affinity antibodies, and as a means to induce tumour proliferation

cin pathologies e.g. acquired immune deficiency syndrome (AIDS), AAS26976-
